5. API Endpoints

Auth

Method	Path	
POST	/api/login	(body: {password})
GET	/api/me	(query: ?token=...)
POST	/api/logout	(body: {token})

Receipts

Method	Path	
GET	/api/receipts	(owner_id user)
DELETE	/api/receipts/:id	(admin)
POST	/api/bulk-delete	(admin)
POST	/api/bulk-update-object	
POST	/api/bulk-update-currency	
POST	/api/upload-receipt	+ (multipart/form-data, image)
POST	/api/reprocess-receipt	
POST	/api/export-excel	Excel (.xlsx)

Models

Method	Path	
GET	/api/list-gemini-models	Gemini
GET	/api/list-groq-models	Groq
GET	/api/list-ocrspace-models	OCR.space

Health

Method	Path	
GET	/health	Health check ()
GET	/api/health	health check (API)
GET	/	endpoint

6. receipts (Supabase)

```
CREATE TABLE receipts (  
  id SERIAL PRIMARY KEY,  
  store_name TEXT,  
  store_name_ru TEXT,  
  receipt_date DATE,  
  receipt_time TIME,  
  total_amount NUMERIC,  
  subtotal NUMERIC,  
  tax_amount NUMERIC,  
  tax_rate TEXT,  
  currency TEXT DEFAULT 'AED',  
  country TEXT,  
  payment_method TEXT,  
  payment_amount NUMERIC,  
  cashier TEXT,  
  items JSONB, -- массив товаров [{name, name_ru, quantity, price, total}]  
  image_url TEXT, -- Supabase Storage public URL  
  raw_text TEXT, -- полный распознанный текст чека  
  document_type TEXT DEFAULT 'receipt', -- 'receipt' | 'invoice'  
  object TEXT DEFAULT 'other', -- 'other', 'Duqe', 'Maria', 'Kit', 'Dubai', 'Tich'  
  recognition_method TEXT, -- какая модель распознавала  
  recognized_at TIMESTAMP,  
  created_at TIMESTAMP DEFAULT NOW(),  
  owner_id TEXT, -- кто добавил (user id)  
  owner_name TEXT -- имя пользователя  
);
```

Storage Bucket: receipt-images (public, policies: SELECT/INSERT/DELETE)

7.

- **Hardcoded users** (11):
 - admin / admin → role: admin
 - user1 / user1 → user10 / user10 → role: user
 - , (in-memory, Railway-safe).
 - **User** (owner_id Supabase).

11. ()

1. Supabase

- .
- SQL supabase-setup.sql (+ bucket + policies).
- SUPABASE_URL, SUPABASE_KEY, SUPABASE_SERVICE_ROLE_KEY.

2. Railway (Backend)

- , GitHub .
- (. 4).
- Build Command: npm install
- Start Command: node index.js
- NO_CACHE=1 Railway .

3. Railway (Frontend)

- `git clone https://github.com/your-repo-name` , GitHub repository.
- Build Command: `npm run build`
- Start Command: `npx serve -s build ( npm start dev)`
- `App.js` `API_URL` `backend`.

4. GitHub

- Backend: `package.json`, `index.js`, `auth-owners.js`, `server.js`.
 - Frontend: `src/App.js`, `src/App.css`.
-

12. (changelog)

2026-07-08

- `auth-owners.js` — `owners-store.json` (Railway read-only filesystem). in-memory.
 - `package.json` — entry point `server.js` `index.js`.
 - `index.js` — graceful error handling Supabase Storage upload.
 - `App.js` — `'loadModels()'`.
 - `bucket name index.js` — `receipts` → `receipt-images`.
 - `owner_id, owner_name, raw_text, recognition_method` upload.
 - `/health` endpoint .
-

13. /

- — Railway (Deploy Logs).
 - — `SUPABASE_SERVICE_ROLE_KEY` policies bucket.
 - — `GEMINI_API_KEY` `GROQ_API_KEY`.
 - iOS Capacitor plugin `ReceiptScannerPlugin`.
-
